The West Grandview pool was opened by Bartle and Marshall in September, 1933, when Swafford No. 1 was completed for 1,000,000 cubic feet in the Peru sand of the Henrietta formation, in section 3, township 47 north, range 33 west. Early in 1934 the Ruf Drilling Company began drilling to the south in section 10 and later in section 15. Twelve gas wells and seven dry holes have been drilled (see Fig. 3). Nearly all the gas is from the Peru sand, although a small amount has been obtained in the Wayside sand of the Pleasanton formation and the Squirrel sand of the Cherokee formation. All the wells are connected to the gathering lines of the Panhandle Eastern Pipe Line Company.
